

## Open Wheel Modified

### 2009 Season

The modified class will allow rules from the **IMCA** and the **UMP** divisions to be blended to provide for a full class of cars. If your modified car is IMCA legal, and is a steel head, flat tappet cam motor, you can run 2400lbs. If your modified is running under UMP rules, and you declare a mushroom, roller or aluminum head motor, you can run and weigh 2450lbs., with 50lbs. of weight that must be bolted in front of the motor plate, evenly distributed if aluminum head. ALL modifieds are going to be on Hoosier G-60 compound tires on the rear. The track will stick the tires for hardness with a durometer.

Also, both series cars can run the UMP approved 5" spoiler. For the full set of **IMCA** or **UMP** rules, you can visit their respective websites and download. All rule determinations will be that of Deep South Speedway and will be final.

Full rules sets can be found at the following websites:
